Pollution Prevention Institute
Environmental Management System Policy
January 2012

PPI's mission is to promote sustainability through environmental education and services to industry and institutions. As such, environmental protection is the very foundation of our mission and activities. Thus, our environmental policy and our day-to-day operations should reflect the fact that we are professionals in the field of environmental management and dedicated to the principles of pollution prevention. The following policy statements stem from a conviction that we can maintain credibility only if we lead by example.

- As we encourage environmental statutory and regulatory compliance by the regulated community, we must ensure that we ourselves meet or exceed all applicable legal and other environmental requirements.
- We will demonstrate continual improvement in our own environmental performance as an example of our expectation of environmental improvement by those we serve.
- Continual improvement requires a commitment to evaluate pollution prevention and source reduction approaches within our office as well as in our external operations.
- As we encourage our clients to inform the public and regulatory community of their environmental performance, we will also take positive steps to consult and inform the public concerning our environmental policy and performance, during both the development and the implementation of our EMS.

PPI environmental specialists pledge to seek other opportunities for environmental and organizational improvement. Through our personal attention and example, we pledge ourselves to provide effective leadership to meet these challenges, and through our annual EMS review we will monitor our environmental performance and the specific objectives and targets developed under our EMS.
