

**Pollution Prevention Institute**  
**Environmental Management System Policy**  
**2017**

The mission of PPI is to promote sustainability through environmental education and services to industry and institutions. As such, environmental protection is the very foundation of our mission and activities. Our environmental policy and day-to-day operations reflect the fact we are professionals in the field of environmental management, dedicated to the principles of pollution prevention. The following policy statements stem from a conviction that we can maintain credibility only if we lead by example.

- As we encourage environmental statutory and regulatory compliance from the regulated community, we must ensure we too meet or exceed all applicable legal and other environmental requirements.
- We will demonstrate continual improvement in our own environmental performance as an example of our expectation of environmental improvement from those we serve.
- Continual improvement requires a commitment to evaluate pollution prevention and source reduction approaches within our office as well as in our external operations.
- As we encourage our clients to inform the public and regulatory community of their environmental performance, we will also take positive steps to consult and inform the public concerning our environmental policy and performance, during both development and implementation of our EMS.

PPI environmental specialists pledge to seek other opportunities for environmental and organizational improvement. Through our personal attention and example, we pledge to provide effective leadership to meet these challenges, and through our annual EMS review, we will monitor our environmental performance as well as specific objectives and targets developed under our EMS.
