Re: Incorrect deadline date in 2021-2022 Underground Storage Tank Calendar

It has been brought to our attention that the 2021-2022 Underground Storage Tank Calendar, which was mailed to UST facilities in Kansas last month, contains an error in the text for August.

In describing new requirements for regular testing of spill prevention equipment, containment sumps, overflow prevention and release detection equipment, the text states that new regulations finalized in July 2021 required tests to be performed for the first time before Oct. 13, 2022. The text should have stated that the regulations were finalized in July 2020 and most importantly, the tests must be performed for the first time by Oct. 13, 2021.

This information is also printed in the back of the calendar and dates given there are correct, so we encourage owners and operators of USTs to refer only to dates in that section of the calendar for this issue. We apologize for any confusion this may have caused.

A corrected version of the calendar is available for download on our website at <https://www.sbeap.org/storage-tanks>, along with other helpful resources. As always, technical assistance is available via phone at 800-578-8898 or e-mail at sbeap@ksu.edu.

Sincerely,

Nancy J. Larson, Director
